

MFS Meridian® Funds Global Total Return Fund

31 JULY 2018

A conservative global balanced fund

The fund's investment objective is to seek total return, measured in US dollars.

Key points:

- Conservative approach to investing in global larger cap companies and global bonds
- Historically the fund has allocated assets at approximately 60% stocks, 40% bonds

** Advises and communicates on the management of the portfolio, but is not responsible for day-to-day management.

Portfolio characteristics data are based on the equivalent exposure of unaudited net assets as of 31-Jul-18. Equivalent exposure measures how a portfolio's value would change due to price changes in an asset held either directly or, in the case of a derivative contract, indirectly. The market value of the holding may differ. The portfolio is actively managed, and current holdings may be different.

Top ten holdings, portfolio characteristics and weightings do not reflect the effect of exposure/weightings for hedging of hedged share classes. Full holdings and net assets do reflect this hedging.

MFS Meridian Funds may be registered for sale in other jurisdictions or otherwise offered where registration is not required. MFS Meridian Funds are not available for sale in the United States or Canada or to US persons. In the United States and Canada this material is for Investment Professional Use Only.

Unless otherwise indicated, logos, product and service names are trademarks of MFS and its affiliates and may be registered in certain countries.

Growth of a \$100,000 investment and 12-month returns at NAV

Class A2USD shares 31-JUL-08 — 31-JUL-18

Fund returns for the representative share class shown assume the reinvestment of dividends and capital gain distributions but do not include a sales charge. Results would have been less favorable if the sales charge were included. This example is for illustrative purposes only and is not intended to represent the future performance of any MFS product. **Past performance is not a reliable indicator for future results.**

Benchmark: 60% MSCI World Index (net div) / 40% Bloomberg Barclays Global Aggregate Index								Performance results reflect ongoing charges and any applicable expense subsidies and waivers in effect during the periods shown. All historic results assume the reinvestment of dividends and capital gains.				
EUR		4.20	7.67	4.44	8.95	8.45		Past performance is not a reliable indicator for future results. All financial investments involve an element of risk. The value of investments may rise and fall so you may get back less than originally invested.				
USD		1.53	6.86	6.45	6.22	5.37		Investors should consider the risks, including lower returns, related to currency movements between their investing currency and the portfolio's base currency, if different.				

Other share classes are available for which performance and expenses will differ.

The source for all fund data is MFS. Source: Benchmark performance from SPAR, FactSet Research Systems Inc.

Fund inception date: 26 September 2005

^ Results represent the percent change in NAV.

^^ Periods less than one year are actual not annualized.

1 The MFS Meridian Funds offer several share classes each with different expenses. Performance reflects the performance of a relevant older class with the same currency until the actual start of class performance record of the class detailed. Performance for periods prior to that date may have been higher or lower had the actual share class fees and expenses been reflected.

2 Hedged share classes aim to reduce exchange rate and return fluctuations between the applicable non-base currency hedged share class and the unhedged base currency class of the fund. From time to time shareholder transactions in the share class could result in a gain or a loss, which could be significant, in the share class value that is attributable to the adviser's hedging activities rather than to its investment management activities. Other share classes will not share in these gains or losses.

3 Unlike other share classes, the Gross Income Share Class pays income before the expenses attributable to the share class have been deducted. This has the effect of increasing the amount of income paid and therefore the distribution rate will be higher than the Income Share Class. However, expenses will be deducted from the fund's capital gains and/or capital which may cause your principal value to be less than your original investment. Investors should discuss the suitability of this share class with their tax or financial advisor.

Returns would have been lower had sales charges, of up to 6% of the net asset value (NAV), or any commissions, fees or other charges that your financial intermediary may charge been reflected.

Class I shares are only available to certain qualifying institutional investors.

Class W shares are available to discretionary portfolio management or independent advisory accounts, clients of financial intermediaries otherwise prohibited from receiving compensation from the Fund, and to employees of MFS and its affiliates.

MFS Global Total Return Blended Index is composed of 60% MSCI World Index and 40% Bloomberg Barclays Global Aggregate Index. MSCI World Index is a market capitalization-weighted index that is designed to measure equity market performance in the global developed markets. Bloomberg Barclays Global Aggregate Index provides a broad-based measure of the global investment-grade fixed income markets.

It is not possible to invest directly in an index.

TRAILING 3 YR RISK MEASURES VS. BENCHMARK (A2USD)

Beta 0.95

Standard Deviation 6.74 vs 6.88

Beta is a measure of the volatility of a portfolio relative to the overall market. A beta less than 1.0 indicates lower risk than the market; a beta greater than 1.0 indicates higher risk than the market. It is most reliable as a risk measure when the return fluctuations of the portfolio are highly correlated with the return fluctuations of the index chosen to represent the market.

Standard deviation is an indicator of the portfolio's total return volatility, which is based on a minimum of 36 monthly returns. The larger the portfolio's standard deviation, the greater the portfolio's volatility.

RISK AND REWARD PROFILE CLASS A2USD

< Lower risk (typically lower rewards) Higher risk (typically higher rewards) >

1	2	3	4	5	6	7
---	---	---	---	---	---	---

The rating is based on past volatility of returns and may be different in the future or for other classes of the fund.

IMPORTANT RISK CONSIDERATIONS

The fund may not achieve its objective and/or you could lose money on your investment in the fund. Stock markets and investments in individual stocks are volatile and can decline significantly in response to or investor perception of, issuer, market, economic, industry, political, regulatory, geopolitical, and other conditions. Investments in debt instruments may decline in value as the result of declines in the credit quality of the issuer, borrower, counterparty, or other entity responsible for payment, underlying collateral, or changes in economic, political, issuer-specific, or other conditions. Certain types of debt instruments can be more sensitive to these factors and therefore more volatile. In addition, debt instruments entail interest rate risk (as interest rates rise, prices usually fall), therefore the Fund's share price may decline during rising rates. Funds that consist of debt instruments with longer durations are generally more sensitive to a rise in interest rates than those with shorter durations. At times, and particularly during periods of market turmoil, all or a large portion of segments of the market may not have an active trading market. As a result, it may be difficult to value these investments and it may not be possible to sell a particular investment or type of investment at any particular time or at an acceptable price. The price of an instrument trading at a negative interest rate responds to interest rate changes like other debt instruments; however, an instrument purchased at a negative interest rate is expected to produce a negative return if held to maturity. The portfolio's investments can continue to be undervalued for long periods of time, not realize their expected value, and be more volatile than the stock market in general. Please see the prospectus for further information on these and other risk considerations.

◆ CREDIT QUALITY

The Average Credit Quality (ACQR) is a market weighted average (using a linear scale) of securities included in the rating categories. For all securities other than those specifically described below, ratings are assigned to underlying securities utilizing ratings from Moody's, Fitch, and Standard & Poor's rating agencies and applying the following hierarchy: If all three agencies provide a rating, the middle rating (after dropping the highest and lowest ratings) is assigned; if two of the three agencies rate a security, the lower of the two is assigned. Ratings are shown in the S&P and Fitch scale (e.g., AAA). All ratings are subject to change. U.S. Government includes securities issued by the U.S. Department of the Treasury. Federal Agencies includes rated and unrated U.S. Agency fixed-income securities, U.S. Agency MBS, and CMOs of U.S. Agency MBS. Other Not Rated includes fixed income securities which have not been rated by any rating agency. The portfolio itself has not been rated.
